Maltimodal Manufacturing Creator Report

Course Name: Gen AI

Institution Name:Medicaps University – Datagami Skill Based Course

Student Name(s) &Enrolment Number(s):

Sr no	Student Name	Enrolment Number
1	Pooja Dangi	EN22CS301708
2	Pransu Singh	EN22CS301735
3	Pratik Patel	EN22CS301748
4	Rahul Negi	EN22CS301778
5	Rupesh Sirvi	EN22CS301834

Group Name:Group 09D7

Project Number:GAI-32

Industry Mentor Name: Yash

University Mentor Name:Dr. Hemlata Patel

Academic Year:2025-2026

Problem Statement & Objectives

1. Problem Statement
2. Project Objectives
3. Scope of the Project

Proposed Solution

1. Key features(
2. Overall Architecture / Workflow
3. Tools & Technologies Used

Results & Output

Add the below details here:

1. Screenshots / outputs
2. Reports / dashboards / models
3. Key outcomes

Conclusion

Mention a brief conclusion about your project summing up everything you have worked on and the key learning.

Future Scope & Enhancements

Problem Statement & Objectives

1. Problem Statement
In today's manufacturing ecosystem, converting an idea into a tangible product involves multiple complex stages such as design modeling, prototyping, and documentation. These stages require expertise in specialized tools like CAD software, design platforms, and engineering knowledge.

This creates several challenges:

- Beginners and students cannot easily visualize their ideas
- Small businesses lack resources for rapid prototyping
- Idea validation becomes slow and costly
- Traditional design workflows are time-consuming

To solve this, there is a need for an **AI-powered system** that can automatically:

- Understand user ideas in natural language
- Generate structured product descriptions
- Create realistic visual prototypes

The **Multimodal Manufacturing Creator** addresses this gap using Generative AI.

2. Project Objectives

Objective	Description
Idea to Design Conversion	Convert raw text ideas into structured manufacturing outputs
Multimodal Output	Generate both **textual descriptions** and **visual prototypes**
Prompt Enhancement	Improve user input using LLM for better results
Semantic Understanding	Use vector database to provide contextual knowledge
User Accessibility	Provide a simple web interface for all users
Automation	Reduce manual effort in design conceptualization

3. Scope of the Project

The scope of this project includes the development of a complete AI-powered system that performs:

- Input processing of manufacturing ideas
- Prompt enhancement using AI models
- Context retrieval using vector database
- Parallel generation of:
  - Product descriptions
  - Functional explanations
  - Prototype images
- Storage of generated outputs
- User authentication and dashboard

Proposed Solution

1. Key Features

Feature	Description
Multimodal Generation	Generates both text and images simultaneously
Prompt Engineering	Enhances user input for better accuracy
Semantic Search	Uses vector DB to retrieve relevant context
Real-time Output	Fast response with generated results
User Dashboard	Stores user history and outputs
Download Option	Allows saving generated results

2. Overall Architecture / Workflow

System Workflow Explanation

The system follows a structured pipeline:

1. User logs into the system
2. User enters a manufacturing idea
3. Backend processes the input
4. Vector database retrieves relevant knowledge
5. Prompt is enhanced using LLM

6. Enhanced prompt is sent to:

- Text Generation Model
- Image Generation Model

7. Results are generated in parallel
8. Outputs are displayed to the user
9. Data is stored for future use

Architecture Table

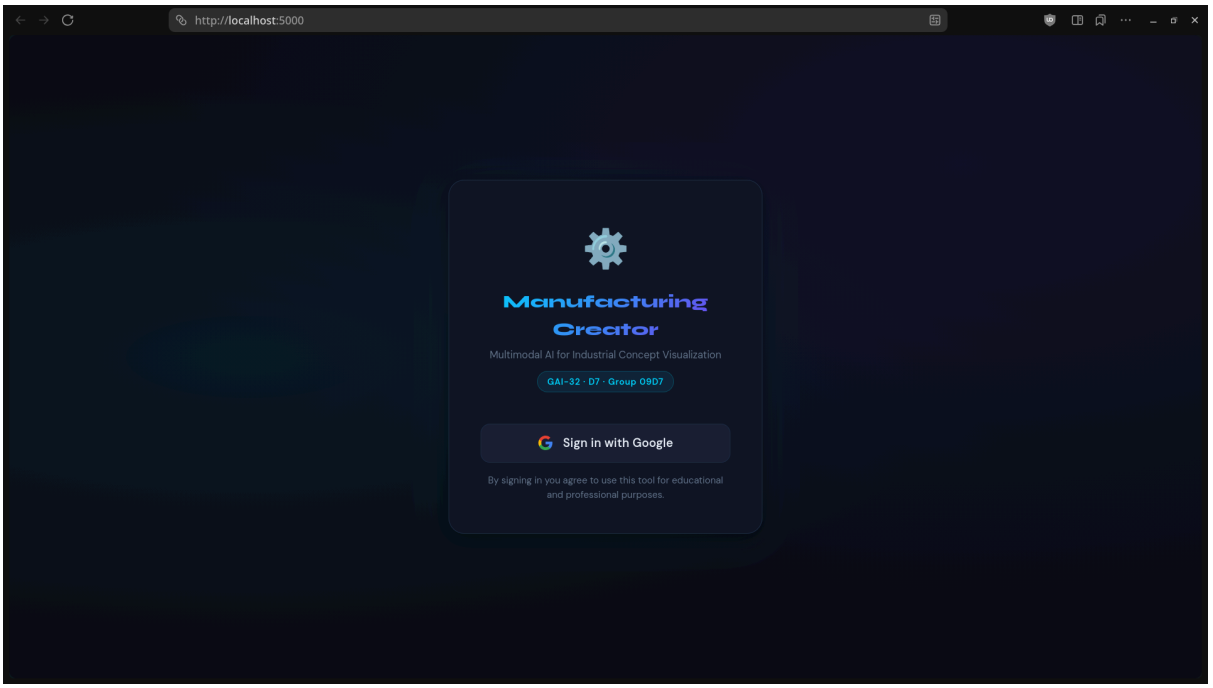
Layer	Components	Responsibility
Frontend	UI, Dashboard	User interaction
Backend	API Layer, Logic	Processing & orchestration
AI Layer	LLM, Image Model	Content generation
Data Layer	DB, Vector DB	Storage & retrieval

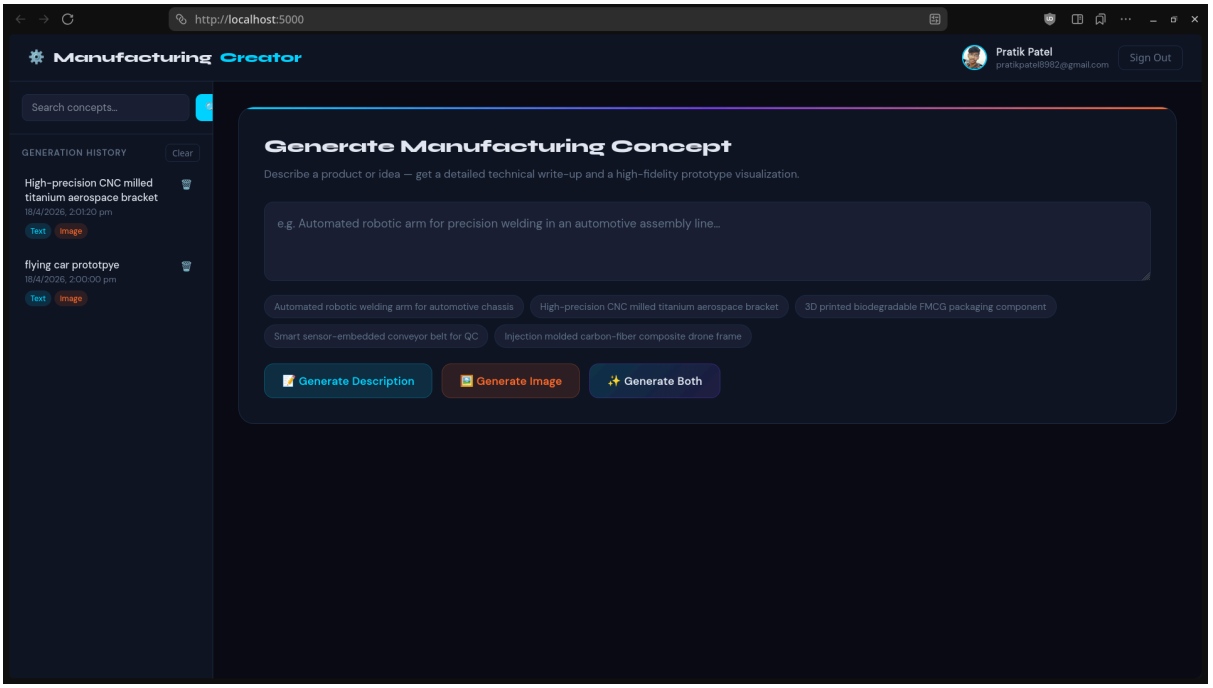
3. Tools & Technologies Used

Category	Technology	Purpose
Frontend	React, HTML, CSS	UI development
Backend	Python (Flask/FastAPI)	API handling
AI Models	LLM (OpenAI), Stable Diffusion	Text & image generation
Database	MongoDB / SQL	Data storage
Vector DB	FAISS / Pinecone	Semantic search
Authentication	Firebase / JWT	User login
Caching	Redis (optional)	Performance optimization

Results & Output

1. Screenshots / Outputs





2. Reports / Dashboards / Models

The system includes the following components:

Component	Description
Prompt Pipeline	Enhances input using LLM
Vector Search Model	Retrieves contextual knowledge
Multimodal Engine	Generates text + image
API System	Handles communication

3. Key Outcomes

- Successfully converted text ideas into structured product descriptions
- Generated realistic prototype images
- Improved accuracy using vector-based context retrieval
- Developed scalable AI architecture
- Reduced dependency on traditional design tools

Conclusion

The Multimodal Manufacturing Creator demonstrates how Generative AI can transform traditional manufacturing workflows. By combining LLMs, image generation models, and vector databases, the system provides an efficient way to visualize and understand product ideas.

The project highlights practical applications of AI in real-world scenarios and provides a foundation for future advancements in automated design systems.

Future Scope & Enhancements

Enhancement	Description
3D Model Generation	Convert designs into 3D CAD models
Voice Input	Accept speech-based input
Mobile App	Android/iOS version
Advanced Customization	Material, size, design controls
Industry Integration	Connect with manufacturing tools
Collaboration	Multi-user project sharing
